

TouchOSC Control Surface Layout for Cantabile© 3 Performer

- | | |
|--|--|
| 1 - Layout Tabs | 6 - Metronome Tempo Select and Display |
| 2 - Set List Grid and General Navigation | 7 - Metronome Time Signature Preset Select and Display |
| 3 - Show Notes Up and Down Scroll Encoder | 8 - Metronome Volume and LED Indicators with Switch |
| 4 - View Buttons and Tablet Initialize | 9 - Next and Previous Song State Switches |
| 5 - Global & Common Gain Levels and Media Player #1 Gain and Speed Control | 10 - Main Transport Controls |
| | 11 - Next and Previous Instant and Delayed Song Switches |

The Navigation Arrows and the Select Button work on all pages of C3. To select and deselect use the select button. To adjust a slider navigate to it and then press and hold select while using the right and left arrows to make the adjustment.

An Apple iPad or Android tablet is required hardware.

The **TouchOSC** app for the tablet or pad is available at the app store for \$ 5.00
TouchOSC Editor and **TouchOSC Bridge** for PC are also required and can be downloaded free at

<https://hexler.net/software/touchosc>

CCStepper is available from **CodeFN42** Software @

<http://www.codefn42.com/ccstepper/index.html>

Installation Instructions and MIDI Implementation Chart

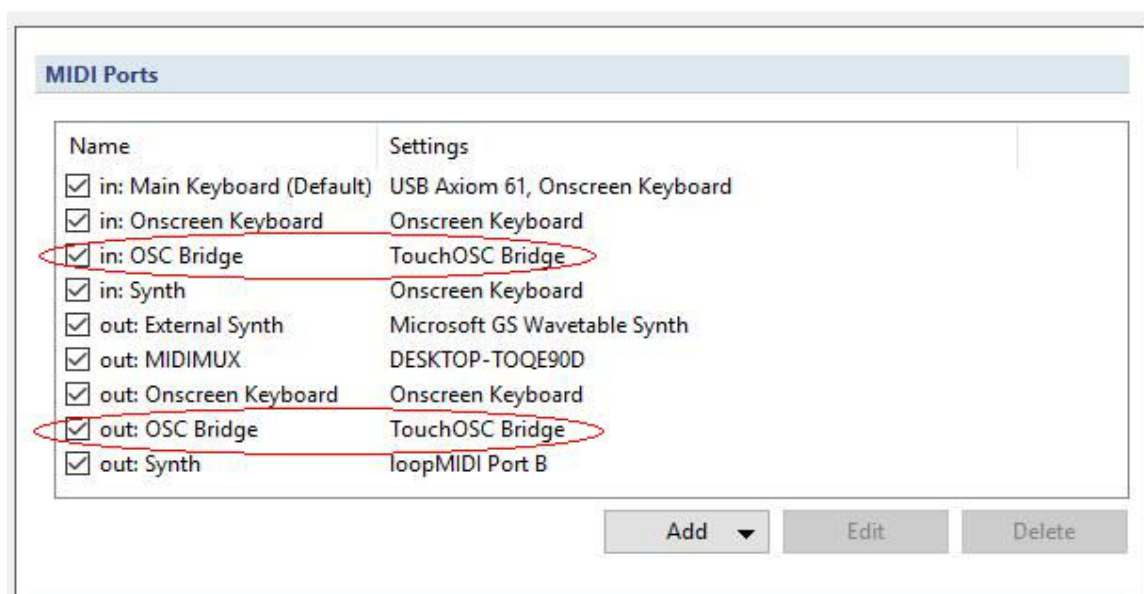

* Cantabile© 3 build 3520 or later required for all metronome functions to operate

Step 1. Install TouchOSC Bridge and TouchOSC editor on the PC or Laptop. Create a start folder shortcut for the Touch OSC Bridge program so it runs automatically at start-up.

Step 2. Unzip the install file to reveal the C3 Generic 35xx Touch OSC Template file, the CC Stepper dll, the "touchoscgeneric" rack file, test racks 1 through 8 and a Sample Song called "test touch 35xx" to help get it tested on your system.

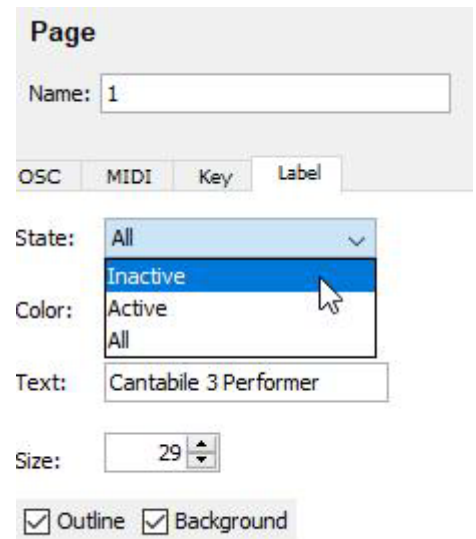

Step 3. Place the CCStepper VSTi in your Vst plugin folder, the "test touch 35xx" sample Song file in the Cantabile Root Folder and the "touchoscgeneric" rack and the test racks 1 through 8 into the Cantabile\Racks folder. (Paths are important)

Step 4. Open Cantabile 3 and create a MIDI In and Out port for the TouchOSC Bridge in Tools>Options>MIDI Ports Call them "OSC Bridge" for both the input and output routes and also set the check-box for the MIDI Clock for the TouchOsc Port.

Step 5. Open the TouchOSC PC Editor (requires Java to run) and open the new C3 TouchOSC file

Step 6. Find the label tab for the first page. It's the default view when you open. Open the State drop down and choose "Inactive". Click on the middle tab (Indexed Controls) and do the same thing and also do it for the Keyboard tab. If these "active" and "inactive" tab label colors and size for the 3 pages are not set then the active and inactive fonts and colors for the layout tabs will not be preserved upon Syncing to the tablet. This is a limit of the Touch OSC Java Editor provided so we have to work with it.

Step 7. Start Touch OSC up on your Pad

Step 8. Press 'Sync' in the TouchOSC PC editor

Step 9. On the tablet or iPad go to Layout and click Add, you will be prompted to save the new or edited file

Step 10. Select the new layout in TouchOSC on the tablet

Step 11. Back on the PC the metronome time signature section are designed to use presets. As a result we need to finish populating the Cantabile Settings file (usually found in C:\Users\Owner\AppData\Local\Topten Software\Cantabile 3.0 (x64)) with the time signatures that were not loaded as part of the default install (there's about a dozen of them in the default setting) as shown below.

```
true,
"metronome": {
  "flashTempoWhenStopped": false
},
"timeSignaturePresets": [
  "2\2", "4\2", "2\4", "3\4",
  "4\4", "5\4", "3\8", "6\8",
  "7\8", "9\8", "12\8"
],
"tempoPresets": [
  108, 120, 60, 96,
  140
]}
```

Using a text editor you can replace these entries with the ones in the provided text file (time signature settings.txt) as opposed to loading the rest of them one at a time in Cantabile. Just copy and paste over the default entries with the ones in the file. It should look like this when you are done then do a full restart of Cantabile to allow the new settings to take effect. The song to song settings must be synced up with the rack logic for it to recall properly on the pad so each song the touchoscgeneric rack is loaded into should be checked for the proper Time Signature and Tempo and then saved, after that C3 and the touchpad will be in sync.

```

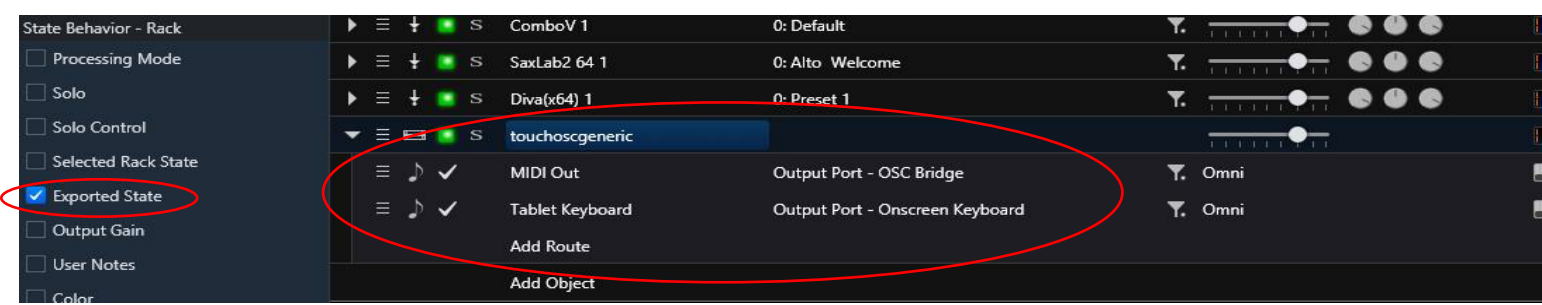

programNumberFormat : Combinedbanks ,
},
    "tempoIndicator": {
true,
    "flashTempoWhenStopped": false
    },
    "metronome": {
        "timeSignaturePresets": [
"2\1", "3\1", "4\1", "5\1",
"6\1", "7\1", "8\1", "9\1",
"10\1", "11\1", "12\1",
"2\2", "3\2", "4\2", "5\2",
"6\2", "7\2", "8\2", "9\2",
"10\2", "11\2", "12\2",
"2\4", "3\4", "4\4", "5\4",
"6\4", "7\4", "8\4", "9\4",
"10\4", "11\4", "12\4",
"2\8", "3\8", "4\8", "5\8",
"6\8", "7\8", "8\8", "9\8",
"10\8", "11\8", "12\8",
"2\16", "3\16", "4\16", "5\16",
"6\16", "7\16", "8\16", "9\16",
"10\16", "11\16", "12\16", "2\32",
"3\32", "4\32", "5\32", "6\32",
"7\32", "8\32", "9\32", "10\32",
"11\32", "12\32"
        ],
        "tempoPresets": [
60, 96, 108, 120,
140
    ]
    }
}

```

Step 12. Load test Template Song in C3 and check routing. The input route should look as shown below. OSC Bridge > touchoscgeneric rack

The output routes from the rack are shown below (next page) for the MIDI Out to the OSC Bridge and the tablet keyboard as well as the check box for the Exported State Behavior for the touchoscgeneric rack so it can react to state changes in tempo, routing etc note: the tempo and time signature are saved with the song so you must initialize each song by selecting and saving a tempo and time signature save to sync for the flashing led vsti. When adding to existing songs remember these routes and check box settings.

Next, replace the VSTI plugins to ones from your system (I left placeholders that probably don't work on your system) and load some songs in the media players to ones from your system.

You also can route the **Tablet Keyboard** output port of the rack to your choice of output routes.

Use the Red '**Init**' button on the main page to cycle the C3 Engine re-start to upload all the current song's controls on C3 to the tablet.

The LED lights on the tablet can be turned on or off using the supplied toggle switch below the LED's on the pad layout.

You can use the test file once it is loaded to help initialize and also link the C3 and touchpad together functionally and check the different controls. In all your songs you use it in always load The touchoscgeneric control rack as the bottom Rack in the output list (since it's a rack it would be addressed by the controller) so keep your Instrument and effects racks stacked above it in the list!

Hope you enjoy it!

Indexed Controls Page

The screenshot displays the Cantabile 3 software interface, specifically the Mixer and Rack sections. The top bar shows the title "Cantabile 3 Performer" on the left, the "C3 Indexed Controls" title in the center, and the "KeyBoard" section on the right. The interface is organized into two main columns: "Mixer" on the left and "Rack" on the right.

Mixer Section:

- Plugin 1:** Gain (95), Wet/Dry (127), Pan (64), Fade (127). Controls: Run (orange), Sus (orange), Play (orange), Stop (orange).
- Plugin 2:** Gain (95), Wet/Dry (127), Pan (64), Fade (127). Controls: Run (orange), Sus (orange), Play (orange), Stop (orange).
- Plugin 3:** Gain (95), Wet/Dry (127), Pan (64), Fade (127). Controls: Run (orange), Sus (orange), Play (orange), Stop (orange).
- Plugin 4:** Gain (95), Wet/Dry (127), Pan (64), Fade (127). Controls: Run (orange), Sus (orange), Play (orange), Stop (orange).

Rack Section:

- Rack 1:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 2:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 3:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 4:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 5:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 6:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 7:** Gain (95). Controls: Run (orange), Sus (orange).
- Rack 8:** Gain (95). Controls: Run (orange), Sus (orange).

The interface uses a dark theme with orange and blue accents. The "Run" and "Sus" buttons are orange, while the "Play" and "Stop" buttons are blue. The "Gain" values are displayed in orange, and the "Wet/Dry", "Pan", and "Fade" values are displayed in blue. The "C3 Indexed Controls" title is in a large, bold, blue font.

Keyboard Page

The screenshot displays the 'Cantabile 3 Performer' software interface. At the top, there are three tabs: 'Cantabile 3 Performer', 'C3 Indexed Controls', and 'KeyBoard'. The 'C3 Indexed Controls' tab is active, showing a control panel with a central circular dial. The dial is labeled with notes C-1, C0, C1, C2, C3, C4, C5, C6, C7, C8, and C9. Below the dial are two buttons: 'Transpose' and 'Octave Transpose'. The 'Transpose' button is highlighted in red. The 'Octave Transpose' button is highlighted in blue. The bottom of the interface shows a virtual piano keyboard with white and black keys.
